

Disney+ Hotstar is an Indian subscription video-on-demand over-the-top streaming service owned by Disney India, a subsidiary of Disney Company, that provides domestic Indian cinema, television, and sports content for India. It also incorporates foreign content and serves Southeast Asia. Hotstar is the second largest OTT platform.

The main goals of this project were to:

Create a report that summarizes the most important findings from the investigation and includes understanding-enhancing graphics.

Making recommendations for the business and presenting significant findings in a personalized manner.

The project process involved:

- Data Overview
- Data Preparation and Cleaning
- Exploratory Data Analysis
- Data Visualization

Data Overview:

The dataset has 6874 rows, 10 columns, and a large amount of alphanumeric data.

Noticed randomness in the dataset that needed to be handled carefully due to its significant incompleteness, or missing data.

Data Preparation and Cleaning

- Ten-column dataset that served as the data source was included in the CSV file. We can edit and clean the data in the Query Editor after choosing Power BI Desktop's "Get Data" option from the CSV file. By default, the first row is promoted to headers and the column types are changed.
- The majority of the cleaning was done in Excel, with a little portion also done in Power BI. I deleted extra spaces in the columns by using the trim function.
- Make sure that there are no special characters, such as /, /n, \, etc., in the title/description column. It has been noted that special characters like "©", "é" are present in title names.
- To handle the same, I ran several replace operations on the column "title".
- As we can see, there are ignoreable missing values for the Run-time for the content type TV and the Episodes and Seasons for the content type Movie.

Exploratory Data Analysis

The dataset consists of ten key features, the majority of which are categorical data. The desired outcomes of the EDA are to assess trends over time, show popular qualities that depend on time and content type, and keep simplicity within the project's context.

Genre

Hotstar offers a range of genres to its subscribers and most of its content fall into multiple genres, however the visual puts into consideration single-genre content. The most popular genres are Dramas (2043), followed by comedy (791) and Romance (642) respectively.

Year

The plot below shows the number of films and television shows that have been released in each year.

Age-Rating

After determining the distribution of ratings among age groups, the above graphic indicates that Netflix has the greatest amount of content for U/A 13+ ratings, followed by U and U/A 16+ ratings respectively.

Type

Movies and television series are the two categories of streaming entertainment that Hotstar offers. Movies make up 66.45 percent of all content on the platform, while TV series make up 33.55 percent, as seen in the bar chart above that illustrates the distribution of content genres.

Runtime

The movies' average runtimes are shown in the bar graph below.
